PROFESSIONAL SUMMARY

Software Development Engineer-1 with mid-level experience delivering .NET/C# solutions for production applications. Modernized over 20 legacy mainframe screens into responsive web-based interfaces for the Missouri Child Support System and optimized SQL Server queries to boost performance. Streamlined CI/CD pipelines using Azure DevOps, enhancing release reliability and traceability. Aiming to apply proven troubleshooting and development expertise to drive high-quality software outcomes.

EXPERIENCE

Deloitte

Jul 2024 - Present

Software Development Engineer-1

Lexington, KY

- Modernized 20+ legacy mainframe screens into responsive web-based applications using ASP.NET Core, Razor Pages, C#, HTML, CSS, jQuery, and Bootstrap, improving usability and maintainability of the Missouri Child Support System.
- Diagnosed and resolved backend, UI, and SQL Server issues in the production codebase using C#, ASP.NET Core, Angular, and GitHub, enhancing features and maintaining system stability, which led to faster issue resolution and uninterrupted service
- Wrote and optimized SQL queries and stored procedures, and engineered reusable components to improve performance and reduce development effort.
- Streamlined CI/CD workflows using Azure DevOps Pipelines, supporting deployments across Dev, QA/QC, and UAT environments, improving release reliability and traceability.

SITEK Inc

Aug 2023 - Apr 2024

Junior .NET Developer

Lexington, KY

- Developed web-application features with ASP.NET Razor Pages, C#, HTML, Bootstrap, and JavaScript, integrating front-end and back-end components, which improved user interaction flow
- Collaborated with team members and stakeholders to support application development, debugging, and deployment activities; contributed to performance improvements, maintained documentation of UI components, and followed best practices in clean and efficient coding.
- Fixed bugs and updated documentation in the existing codebase using GitHub and AI-assisted code review tools, ensuring smoother ongoing development and reducing future errors

Eastern Kentucky University

Aug 2022 - May 2023

Graduate Assistant Programmer

Richmond, KY

- Collaborated with the professor and team to develop and deploy web applications using Node.js and ASP.NET Core, implementing JWT authentication and performance tweaks, which resulted in smoother integration and faster page loads
- Worked with front-end technologies like HTML, Bootstrap, and JavaScript to support project development, focusing on responsive design and user experience. Assisted with integrating components into .NET Razor Pages, enhancing the functionality and user interface of web applications for academic projects.
- Assisted in the development and maintenance of .NET-based web applications, supporting integration and improving system functionality.

EDUCATION

Eastern Kentucky University

Master's degree, computer science

Richmond, KY

- GPA: 3.88

Parul University

Bachelor's degree, computer science

Gujarat, India

- GPA: 9.0

TECHNICAL SKILLS

- ASP.NET MVC, ASP.NET Core, .NET Core, Web API, C#, JavaScript, TypeScript, Angular, Node.js, jQuery, AJAX, SQL, Microsoft SQL Server (queries, stored procedures, performance tuning), HTML5, CSS, Git, GitHub, Azure DevOps, Jira, CI/CD, JWT, Microsoft Azure, Claude Code, AI-assisted code review, Prompt-driven development

PROJECTS

Missouri Child Support System Modernization (MO)

- Developed and enhanced web application modules using ASP.NET Razor Pages and C#, building responsive and accessible user interfaces with HTML, Bootstrap, and JavaScript as part of a large-scale government system modernization effort. Integrated legacy mainframe systems with modern applications using proxy DLLs and RESTful APIs, enabling secure and seamless data exchange between distributed services.
- Implemented accessibility best practices using NVDA, ensuring compliance with usability standards (Section 508/WCAG) and improving overall user experience.
- Collaborated with cross-functional teams to support development, debugging, testing, and deployment, contributing to performance optimization, system reliability, and clean, maintainable code.

Investment Calculator – Angular-16

- Developed an Investment Calculator using Angular 16. The application allows users to input their initial investment, annual investment, expected return rate, and investment duration. The form, designed with HTML and CSS, is fully responsive, ensuring optimal user experience across different devices.
- Used Angular's reactive forms to handle user input, validating and processing data in real-time. The calculator dynamically computes the investment growth over time based on user-provided inputs, utilizing the power of Angular's data binding and Event Emitter to manage calculations efficiently.
- Designed the Code behind Logic using TypeScript ensures that user data is captured and processed seamlessly, making the application intuitive for all users.

Calendar System – ASP.NET, C#

- Developed a calendar system using .NET and C# that allows users to schedule, update, and delete meetings, featuring a user-friendly interface and monthly overview for seamless event management.
- The application includes robust features for managing meeting details such as time, date, and location, with built-in validation to prevent scheduling conflicts. The backend logic, developed in C# and integrates with a database to store meeting information securely.
- Integrated back-end logic in C# to handle dynamic data processing and secure user authentication, ensuring a reliable and safe user experience.
